A modern wood board material low in weight, with increased stability which allows creative freedom in design increasingly required.

The aim reduces the maximum weight possible without losses in load capacity is only possible using honeycomb board panel. Thanks to this concept, the use of Cartoflex honeycomb paper as filling system for furniture construction and fittings has spread rapidly during the past few years. The demand for a versatile support which is extremely light, cheap, with a high performance/weight ratio, is the secret of success.
